SUMMARY

Final-year Computer Engineering student skilled in Java, Python, C++, MERN stack, debugging, APIs, and system design, with hands-on development experience and strong problem-solving, communication, and teamwork abilities.

EDUCATION

Marwadi University

2022-2026

B.Tech in Computer Engineering, 9.63 CGPA

Rajkot, Gujarat

TECHNICAL SKILLS

Programming Languages: Java, Python, C++, JavaScript (ES6+), SQL/MySQL

Full Stack Development: ReactJS, Node.js, Express.js, MongoDB, Flask, Firebase

Software & Tools: Git/GitHub, Postman, CI/CD, MLflow, Docker(Basics)

Core Concepts: Object-Oriented Design, Algorithms, Data Structures, System Design, Performance Optimization

Other: API Development, Software Debugging, Scalable Software Architecture, Agile Development

EXPERIENCE

BrainyBeam Info-Tech Pvt. Ltd.

May 2024 - June 2024

MERN Stack Developer Intern

Ahmedabad, Gujarat

- Developed DelishDash, a full-stack food-ordering app with Node.js/Express backend, MongoDB database, and ReactJS frontend.
- Designed and optimized REST APIs, improved query performance, and implemented error handling & debugging workflows.
- Worked on backend architecture optimization, gaining real-world exposure to production-level systems and cross-platform deployment.

PROJECTS

Hybrid Resume Screener (AI + Full Stack) | [GitHub Link](#)

ReactJS, NodeJS, Python, Azure OpenAI GPT-4o

- Engineered an AI-driven ATS system combining semantic similarity and feature-based matching, achieving 30% higher accuracy than keyword-based methods.
- Built scalable APIs integrating ML/NLP models, deployed via Flask backend.
- Created React dashboard for ATS scoring, candidate-job recommendations, and skill gap insights.

TedTalks Recommendation System (ML + Full Stack) | [GitHub Link](#)

DistilBERT, Hugging Face, Flask, Firebase, ReactJS

- Implemented BERT-based NLP model for TED Talk recommendations with 25% accuracy improvement over TF-IDF.
- Deployed Flask API backend integrated with ReactJS frontend and Firebase Auth.
- Scaled to handle 4600+ entries, maintaining low-latency inference.

Snap2Model – AI-Powered Digital Twin Creator | [GitHub Link](#)

Python, OpenCV, COLMAP, Instant-NGP, NeRF, CUDA

- Developed a 3D reconstruction pipeline converting smartphone videos into 3D models using computer vision and Neural Radiance Fields (NeRF).
- Optimized data preprocessing, achieving ~70% accuracy compared to LiDAR-based systems.
- Delivered Blender-compatible 3D outputs for creators without specialized 3D scanners.

ACHIEVEMENTS & CERTIFICATIONS

Secured Perfect **10.0 SGPA** in Semester 5 (B.Tech Computer Engineering)

Earned **LeetCode 2024 Badge** for solving daily coding challenges **300+** consecutive days.

Explore Machine Learning using Python – Infosys Springboard

Issued Mar 2025

Enterprise Data Science in Practice – IBM

Issued Jan 2024

Database Programming with SQL – Oracle Academy

Issued Oct 2023

POSITION OF RESPONSIBILITY

Campus Creative Officer – 10X Club of Coding Ninjas

Jan 2025 - Continue

Collaborated with cross-functional teams to organize coding events, design content, and foster engagement. Enhanced leadership, communication, and teamwork skills.
